

A Portrait of the Youth Labour Market in Ontario

Youth employment has yet to rebound since 1989 highs

For most of the 1990s, employment opportunities for young people (age 15 to 24) were scarce. The recession at the beginning of the decade had a lasting effect on the youth labour market. In 1989, youth employment and participation rates were at record highs, but following years of layoffs and weak hiring, labour-market conditions for youth hit a 21-year low in 1997.

The early 2000s showed promise for young people in Ontario with an employment rate of 58% in 2000. Since then, employment has declined to 51% across the province, setting a new low for youth employment in 2010.

Decline highest for young men in the labour market

From 2006 to 2010, women experienced the greatest increase in employment at 5%, compared to less than one percent among men.

Young women captured 463,500 of the 905,900 jobs created during the 2006 to 2010 period (down 3.6%), compared with 442,400 for young men (down 8.1%).

Highest growth in educational services industry

Youth employment has increased by 20% in the educational services industry across Ontario. Professional, scientific and technical services and construction also show increases during the 2006 to 2010 period.

Did you know?

The number of students coming out of Canada's education system will remain the primary source of new supply for the Canadian labour market, representing approximately 550,000 new labour market entrants each year over the next decade.

Putting jobless youth in context

In 2009, the Conference Board of Canada studied sixteen countries to better understand jobless youth (the proportion of people aged 20-24 not going to school or working). With 13% of Canadian youth not in school or working, Canada received a "B" grade and ranked 9th out of 16 peer countries. This means a sizable proportion of young people have not made the transition from formal schooling to work as quickly or as seamlessly as possible.

According to the study, youth are leaving school without the skills and experience needed to move into a career path that will ensure lifelong self-sufficiency. Compared to their peers, these youth are at greater risk of unemployment, poverty, and social exclusion throughout their lives.

Why higher youth unemployment?

Youth unemployment rates are relatively higher for a number of reasons. Young people are among the most vulnerable during an economic downturn when workers are being laid off and hiring slowdowns.

First, youths usually have the least seniority, the least work experience, and the least amount of company training invested in them, and they are more likely to be working on a short-term contract. They are, therefore, the most likely to be let go.

Another barrier for youth, regardless of the state of the economy, is that young people simply have less experience in looking for work. Many youths lack experience in the process of finding a job.

Fewer resources, stronger financial attachments to family, and less mobility are additional barriers preventing youth from accessing jobs outside of their community.
